

CLARIX FLO* can help manage a wide range of joint discomfort without surgery

clarix®
FLO

CLARIX® FLO injectable may help diminish musculoskeletal discomfort and improve function and range of motion.

A Note About Safety

After more than 500,000 procedures, there have been no reports of disease transmission or tissue rejection from amniotic tissue products produced by AmnioX Medical or its family of companies. While these clinical experiences are valid, it is not possible to predict or warrant specific results, nor is it possible to guarantee patient and/or clinical satisfaction.

*CLARIX FLO is a natural injectable that supports joint and soft tissue healing as an alternative to corticosteroids or opioids.

Ask your doctor how our wide range of adjunct therapies can help support regenerative and functional recovery.

These therapies may help you **recover** and **heal faster**. The natural power of human umbilical cord and amniotic membrane is revolutionizing many areas of medicine. These game changing treatments **encourage your body to repair itself by reducing inflammation and regenerating damaged tissues**.

Regenerate. Restore. Recover.

Return to your daily life activities.

Maintaining an active lifestyle after suffering from a debilitating injury or joint disease can be difficult. Inflammatory or degenerative conditions can severely restrict your activity, leaving you with extreme pain and disability. Delays in wound healing may lead to chronic conditions with complications including severe discomfort and potential infection.

At Amniox Medical, we are leveraging the science of regenerative medicine to help manage discomfort and restore function for daily life activities with our comprehensive family of innovative adjunct therapies and injectables.

Harnessing the Unique Power of Human Birth Tissue

These natural tissue-based therapies have been shown to help direct the body's cells and molecules to act in a coordinated manner so the body can heal itself. This may lead to **faster rehabilitation, faster recovery and faster return** to your daily activities after tissue or joint surgery, or wound repair.

How is the tissue acquired?

Amniox Medical obtains the tissue used in its products through a voluntary donation program across the US. Before donation, donor mothers are screened to ensure safety, based on requirements established by the Food & Drug Administration (FDA) and the American Association of Tissue Banks (AATB). The donated tissue is also screened for infectious diseases.

To support regenerative healing and functional recovery in...

- soft tissue and nerve repair
- bone and joint reconstruction
- cartilage debridement and repair
- fractures and non-unions
- complex orthopaedic reconstruction
- osteoarthritis
- back (discogenic pain)
